

2022

Environmental Goals

Given the move to our brand new facility in Oxnard, MWS is pleased to update our Environmental Goals. The state-of-the-art Oxnard location features a 274 kW photovoltaic solar generating system that includes 753 modules and 5 inverters, an improvement over our Westlake location's 155 kW PV system. This new system is engineered to provide green energy for more than half of MWS' operational needs as well as feeding back into the system on off days.

- 1 Return and track 20,000 pounds of packaging for reuse. Continue to refurbish and reuse spools for internal use.**
